CCTV Exam Monitoring – Client API v1

GET endpoints · SSC Combined Graduate Level Examination 2026 · Provided by CDIS · 30 Sep 2026

- Overview
- Authentication
- Endpoints
- GET /cameras
- GET /master/camera-types
- GET /master/event-types
- GET /master/current-schedule
- Errors

Overview

Four read-only GET endpoints give you the cameras, camera types, detection event types and current schedule for **SSC Combined Graduate Level Examination 2026**. All responses are JSON.

Item	Value
Base URL	`http://examscctvmonitoring.com/cctv_analytics/api/v1`
Method	`GET` (all endpoints)
Response format	`application/json`
Scope	One exam only: SSC Combined Graduate Level Examination 2026
Vendor	`vendor_id` = `CDIS` in every response

Data is live: camera types and statuses change as cameras are classified and come online during the exam.

Authentication

Every request must send the API key in the `Authorization` header as a Bearer token. Requests without it, or with a wrong key, get `401 Unauthorized`.

Header

```
Authorization: Bearer <API_KEY>
```

API key

The API key is provided separately by CDIS. Keep it confidential and use it only from your servers. It does not expire; contact CDIS if it needs to be rotated.

Example request

```
curl -H "Authorization: Bearer <API_KEY>" \
  http://examscctvmonitoring.com/cctv_analytics/api/v1/master/camera-types
```

Endpoints

All paths are relative to the base URL. None take query parameters.

Method	Path	Returns
GET	`/cameras`	Every camera of the exam, with its centre, type and status
GET	`/master/camera-types`	Camera types used by the exam's cameras
GET	`/master/event-types`	Detection scripts scheduled for the exam (the event types)
GET	`/master/current-schedule`	The exam's client and schedule name

GET `/cameras`

Returns one entry per physical camera of the exam (about 3,100 for this exam).

Example response

```
{
  "cameras": [
    {
      "cam_id": "1000831$14",
      "cam_type": 1,
      "cam_type_name": "InsideLabs",
      "tc_code": "350713",
      "center_name": "ALLEN INFORMATICS CENTER",
      "city": "KANPUR",
      "state": "UTTAR PRADESH",
      "status": 1,
      "status_name": "AnalyticsLive",
      "vendor_id": "CDIS"
    }
  ]
}
```

Field	Type	Description
`cam_id`	string	Unique camera identifier, in the format `<device_id>$<camera_no>`
`cam_type`	integer	Camera type id; see `/master/camera-types`
`cam_type_name`	string	Camera type name
`tc_code`	string	Test centre code
`center_name`	string	Test centre name
`city`	string	City of the test centre
`state`	string	State of the test centre
`status`	integer	Camera status id; see Status values
`status_name`	string	Camera status name
`vendor_id`	string	Always `CDIS`

Status values

id	name	Meaning
0	Idle/Ready	Camera is working, but today is not an exam day
1	AnalyticsLive	Camera is working and AI analytics is running
100	ClassificationPending	Camera is not classified yet
200	Excluded	Camera is inactive or its view is Invalid
9999	Other	Camera is not accessible (offline)

GET /master/camera-types

Returns only the camera types that this exam's cameras actually have. The type comes from AI scene classification of each camera.

```
{
  "camera_types": [
    { "id": 1, "name": "InsideLabs", "vendor_id": "CDIS" },
    { "id": 2, "name": "ServerRoom", "vendor_id": "CDIS" },
    { "id": 3, "name": "BiometricArea", "vendor_id": "CDIS" },
    { "id": 4, "name": "Outside", "vendor_id": "CDIS" },
    { "id": 5, "name": "EntryExit", "vendor_id": "CDIS" },
    { "id": 9, "name": "Invalid", "vendor_id": "CDIS" },
    { "id": 0, "name": "Other", "vendor_id": "CDIS" }
  ]
}
```

id	name	Meaning
1	InsideLabs	Inside an exam lab or classroom
2	ServerRoom	Server room
3	BiometricArea	Biometric verification area
4	Outside	Outside area, corridor or parking
5	EntryExit	Entry or exit gate
9	Invalid	View unclear or obstructed
0	Other	Any other area, or type not yet known

GET /master/event-types

Returns the AI detection scripts scheduled for this exam. Each `id` identifies one event type; the list grows if more scripts are scheduled.

```
{
  "event_types": [
    { "id": 1, "name": "Server Room Detection", "vendor_id": "CDIS" },
    { "id": 6, "name": "Phone Detection", "vendor_id": "CDIS" }
  ]
}
```

Event types currently scheduled for this exam:

id	name
1	Server Room Detection
2	Crowd Detection (Entry/Exit)
4	Entry Exit Detection
5	Proximity Detection
6	Phone Detection
7	Invigilator Detection
16	Camera Inversion Detection
1389	Zero Person Detection
1390	Crowd < 5
108207	Monitor Tampering Detection
110069	Crowd < 5 + Invigilator Static

GET `/master/current-schedule`

Returns the exam's client and schedule name.

```
{
  "schedules": [
    {
      "client_name": "SSC",
      "schedule_name": "SSC Combined Graduate Level Examination 2026",
      "vendor_id": "CDIS"
    }
  ]
}
```

Errors

Errors return a JSON body with a single `error` message.

```
{ "error": "Invalid API key" }
```

Status	When	Example `error`
200	Request succeeded	—
401	`Authorization` header missing	`Missing Authorization: Bearer <API_KEY> header`
401	API key is wrong	`Invalid API key`
404	Path does not exist	—
500	Unexpected server error; retry later	`Internal server error`
