common cameras per shift, average
(same cameras for both systems)

1. Summary

- **Scope.** 17 day-shifts across 6 exam days (16 Oct Shifts 2–3, and 22, 23, 24, 27 and 28 Oct, all three shifts). 16 Oct Shift 1 is excluded. CDIS did not run on 23 Oct Shift 3.
- **Volume.** Superview raised **48,657** events; CDIS pushed **28,096** detections to the client, 57.7% of Superview's volume (42% fewer alerts).
- **Accepted.** The client accepted **2,322** CDIS detections (**8.3%**) and **288** Superview events (**0.6%**). CDIS produced 8.1 times as many accepted alerts.
- **Rejected (rejected + pending).** 99.4% of Superview events (48,369) and 91.7% of CDIS detections (25,774) were not accepted. Pending: Superview 21,851, CDIS 10,225.
- **Review effort.** The client reviewed 12.1 CDIS detections per accepted alert, against 169 Superview events per accepted alert.
- **By shift.** CDIS accepted rate: Shift 1 6.8%; Shift 2 10.9%; Shift 3 7.1%. Superview: Shift 1 0.7%; Shift 2 0.6%; Shift 3 0.5%.
- **By day-shift.** CDIS had the higher accepted rate in **16 of 16** day-shifts in which it ran (CDIS 4.3%–13.4%; Superview 0.1%–1.1%). Best day for CDIS: 28 Oct, 10.9%.
- **By analytic.** CDIS had the higher accepted rate in **10 of 10** analytics operated by both systems. Analytics raised only by Superview: Monitor Tampering (4,352 events, 1 accepted).
- **Cameras.** Both systems are compared on the same **4,015** common cameras per shift on average (cameras Superview scheduled, all of which are in the CDIS list). Online on average: Superview 3,834 (1,832 fully online + 2,002 partially offline), CDIS 3,719 (shifts in which CDIS ran). 314 CDIS detections on other cameras are left out.
- **Event matching.** 3,277 Superview events and 2,850 CDIS detections refer to the same event (same camera and analytic, within ±3 minutes). 45,380 Superview events and 25,246 CDIS detections have no counterpart.
- **Accepted events side by side.** Of the accepted alerts, 15 events were accepted on both systems, 253 accepted Superview events had no CDIS detection, and 2,191 accepted CDIS detections had no Superview event.

2. Camera Comparison

- **Only common cameras are counted:** cameras scheduled in Superview's camera report for the session that are also in the CDIS camera list of the shift (same device, camera number and TC code). Every Superview scheduled camera is in the CDIS list, so both systems have the same total, on average 4,015 cameras across 113 centres per shift. CDIS cameras outside Superview's schedule, and their detections, are excluded.
- Superview status of its scheduled cameras, average per shift: **1,832 fully online** (45.7%), **2,002 partially offline** (49.7%, online for part of the shift) and **181 fully offline** (4.5%). Across the 17 shifts this is 31,150 fully online, 34,028 partially offline and 3,074 fully offline camera-shifts.
- Counting fully online and partially offline cameras as online, Superview averages 3,834 online cameras (95.5% of scheduled); only 45.7% of its scheduled cameras stayed online for the whole shift. CDIS averages 3,719 online cameras (92.4% of the same cameras).
- The two systems define "online" differently (see the notes), so online percentages are indicative, not directly comparable.

Superview: % Fully online = fully online ÷ scheduled; % Partially online = partially offline ÷ scheduled; † % Online = % Fully online + % Partially online = (fully online + partially offline) ÷ scheduled. CDIS: Online % = online ÷ total. Average row = average of the shift percentages.

Day · Shift	Superview (common cameras)								CDIS (common cameras)

3. Event Comparison

- 3,277 of 48,657 Superview events (6.7%) have a CDIS detection on the same camera and analytic within ±3 minutes; 2,850 of 28,096 CDIS detections (10.1%) have a Superview event.
- Most unmatched events occur on cameras that were online on both systems: one system raised an alert and the other did not. The table of reasons below lists the cases explained by camera lists and camera status.
- Accepted alerts only: 15 same-event pairs were accepted on both systems; 253 accepted Superview events and 2,191 accepted CDIS detections have no counterpart. 35 of Superview's 288 accepted events were matched by CDIS.

By exam day

Day	Superview events	CDIS detections	Superview events matched	CDIS detections matched	Superview only	CDIS only
16 Oct	5,627	3,067	262	255	5,365	2,812

Why an event has no counterpart (camera-related reasons)

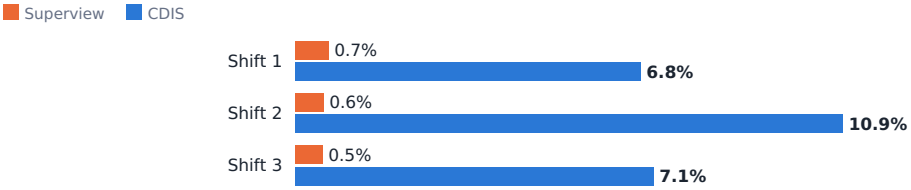

Event	Reason	Events
Superview event, no CDIS detection	CDIS camera was offline (not classified) for the shift	4,507
CDIS detection, no Superview event	Superview camera offline for the whole shift	115

4. Accepted % and Rejected %

Accepted = accepted by the client. *Rejected = rejected **plus** pending (everything not accepted), for both systems. Accepted % and Rejected % are shares of each system's own total.

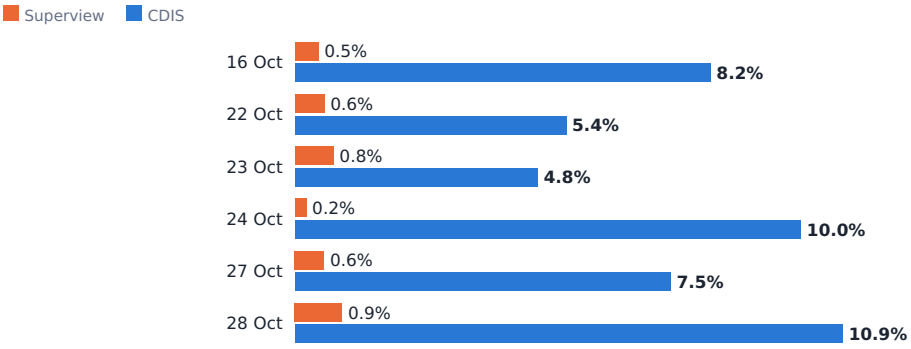

Overall and by shift

Shift	Superview					CDIS				
	Total	Accepted	Accepted %	Rejected*	Rejected %	Total	Accepted	Accepted %	Rejected*	Rejected %

5. Notes

- **Sources.** Superview events: Events Report export of each session (16–27 Oct exported 29 Oct, 28 Oct exported 30 Oct 2026). Superview cameras: Detailed Report of each session from the camera reports provided. CDIS: database of 31 Oct 2026, detections pushed to the client, limited to the centres running that shift and to the common cameras.
- **Status.** Superview *Verified* and CDIS accepted by client = Accepted. Pending items have not yet been reviewed by the client, so both accepted rates are lower bounds and may change.
- **Cameras.** Superview (its camera report): *Online* = online for the whole shift (fully online); *Partially Offline* = offline for part of the shift; *Fully Offline* = offline for the whole shift; *Not Scheduled* cameras belong to centres that did not run the session and are out of scope. Online % counts fully online + partially offline. CDIS: online = classified in the shift's latest classification run. Only common cameras are counted (scheduled by Superview and in the CDIS camera list); CDIS online/offline are counted on those cameras. CDIS detections on other cameras are left out.
- **Matching.** Camera identity is device, camera number and TC code. Same event = same camera and analytic within ±3 minutes. Phone alerts are split into Inside Lab and Server Room by camera class.
- **CDIS detections left out.** 314 pushed detections on cameras outside Superview's schedule (common-camera rule) and 764 at centres not running the shift.
- **Excluded.** 16 Oct Shift 1 is excluded. 23 Oct, Shift 3: CDIS did not run (no classification run and 0 detections), so Superview's 2,688 events in this shift have no CDIS counterpart.
