CCTV ANALYTICS · CDIS, IIT KANPUR

AI Exam Surveillance · Every Camera, Every Shift

One AI platform that plugs into any exam centre's CCTV over RTSP or HLS, understands every room, catches malpractice live and sends verified alerts to the exam body within seconds.

RTSP + HLS Links | 18 AI Analytics | 80–90% Accuracy | 1 Lakh Camera Capacity | Human Verified

1 lakh+
camera capacity
scales out with GPU servers

80–90%
detection accuracy
fine-tuned on exam-centre footage

18
AI analytics
people, objects, rooms, cameras

45,827
camera feeds monitored
across 8 national exams

WHAT WE DETECT

Each camera gets only the analytics that fit its room

Crowd & Movement
Crowding at entry and outside · fewer than 5 in a lab · empty room · entry / exit during the exam · intruder in a closed room

Invigilators
Invigilator absent from the room · standing still for 7 minutes · too few candidates with the invigilator

Malpractice
Mobile phone in the exam hall · two candidates too close, with repeat counting for the same pair

Equipment
Exam computer moved, lifted or carried away · question-paper box missing · damaged or missing furniture

Secure Rooms
More people than allowed in the server room · movement in the strong room · area hidden from the camera

Camera Health
Room type found automatically · camera not reachable · view blocked, blurred or turned upside down

ANY CAMERA LINK

Plug in RTSP or HLS, no new hardware
Works with the cameras centres already have

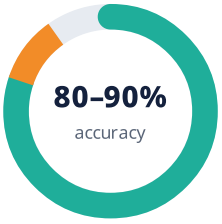

RTSP
Centre DVRs and NVRs, read live through the relay server

HLS
Web video streams from hosted or cloud camera services

ON EVERY LINK	DONE BY
Room type and reachability before each shift	**Vision AI**
Analytics chosen by room type	**Automatic**
Reconnect after a stream drops	**Automatic**

ACCURACY

80–90% detection accuracy
Built so that what reaches the client is real

1. **Trained on our own footage**
   Models fine-tuned on real exam-centre cameras
2. **Confirmed twice**
   An alert needs two hits in a row
3. **Checked by a person**
   Operators verify before the client sees it

HOW IT WORKS

From camera frame to verified alert
One model pass per frame, shared by every analytic on that camera

Stream — RTSP or HLS link
› **Detect** — People, phones, monitors
› **Confirm** — Two hits in a row
› **Alert** — Dashboard and SMS

MODEL	USED FOR
YOLO26m (fine-tuned)	People analytics
RF-DETR (fine-tuned)	Mobile phones · equipment
Qwen3-VL 30B	Room type · on-screen text

PROVEN AT SCALE

Running on national exams today
NEET · UGC NET · SSC CGL · UPCISB and more

30,137
cameras in a single exam

2,019
exam centres covered

4.44 lakh
AI alerts handled

1.07 lakh
verified alerts sent

CAPACITY	FIGURE
Live streams on one H200 GPU server	**800**
Total camera capacity	**1 lakh+**

Any Camera
RTSP and HLS links on one platform.

Catch It Live
18 analytics through every exam shift.

Accurate
80–90% accuracy, confirmed by a person.

Scales Out
Up to 1 lakh cameras with more servers.
